The LEGO motor. To get things moving

The LEGO motor can be used together with all your LEGO bricks so that you can make your models move. Up and down, backwards, round and round.

107 Complete motor set

From 6 Years

LEGO Universal Motor

The LEGO motor is designed to be used in conjunction with other LEGO sets to make things move for added realism. Cars and trucks, helicopter props, windmills and cranes - they all move with the LEGO Universal Motor. But it does something else, too. It makes them different. To become motorized, a car has to be rebuilt, re-designed, proportioned differently, or even enlarged. Exactly how it changes is up to the builder. But a specific challenge is presented that brings a child's imagination, perception and intelligence all into play.
